Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/622,755

Applicant(s)

SMITH ET AL.

Examiner

Andrea M. Ragonese

Art Unit

3743

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 July 2004.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-59 is/are pending in the application.
- 4a) Of the above claim(s) 19-59 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-18 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☒ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☒ Certified copies of the priority documents have been received in Application No. 09/850,797.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 9/03, 12/03, 12/03.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

Priority

1. Acknowledgment is made of applicant's claim for foreign priority based on applications filed in New Zealand on May 10, 2000 (SN 504439) and December 20, 2001 (SN 509041). It is noted, however, that applicant has not filed a certified copies of neither the 504439 nor the 509041 application, as required by 35 U.S.C. 119(b), in the instant application or in the parent application, US Application No. 09/850,797.

Specification

2. The use of the trademark NAFION® and SYMPATEX® has been noted in this application. It should be capitalized wherever it appears and be accompanied by the generic terminology.

3. Although the use of trademarks is permissible in patent applications, the proprietary nature of the marks should be respected and every effort made to prevent their use in any manner, which might adversely affect their validity as trademarks.

Election/Restrictions

4. Applicant's election without traverse of **claims 1-18** in the reply filed on July 26, 2004 is acknowledged.

5. **Claims 19-55** are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on July 26, 2004.

Double Patenting

6. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

7. A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

8. Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

9. **Claims 1-18** are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-44 of U.S. Patent No. 6,769,431 B2 by Smith et al. in view of Wikefeldt (US 6,523,538 B1). Smith et al. discloses an breathing circuit limb comprising all the limitations in **claims 1-18**, with the exception of a water vapour flow path from the exhalation flow passage to ambient air through said material. However, the use of this type of flow path in which the water

Art Unit: 3743

vapour passes through the hydrophilic material from the exhalation flow passage and then exits to ambient air in order to prevent the build up of condensation in the exhalation flow passage was known at the time the invention was made. Specifically, Wikefeldt teaches a water vapor flow path through chamber **142** from an enclosing wall of tube **140**, which serves as the exhalation flow passage in dryer **100b**. Water vapour from the breathing gases passes through a moisture permeable element of tube **140** into chamber **142** and then exits from chamber **142** to the ambient environment by way of outlet **146** (column 5, lines 38-60). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the breathing circuit limb of Smith et al. by altering the water vapour to exit from the exhalation flow passage to the ambient air because it is well known in the art, as taught by Wikefeldt, to reduce condensation in the breathing circuit while “[removing] the water vapor from the breathing gases” (column 2, lines 50-54).

Claim Rejections - 35 USC § 112

10. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

11. **Claims 1-18** are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Specifically, in **claim 1**, the recitation “a water

Art Unit: 3743

vapour flow path from said exhalation flow passage to ambient air through said material” does not have a fully supporting disclosure such that one of ordinary skill in the art would understand the metes and bounds of the claimed invention. The Examiner notes that on page 2 of the specification, this exact phrase from **claim 1** is recited in multiple locations, but beyond this verbatim recitation being made, there is no further support articulated in the disclosure (including the drawings) to describe (or depict) this “flow path” or its “passage to ambient air.”

Claim Rejections - 35 USC § 102

12. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

13. It should be noted that the instant application is a divisional of US Application No. 09/850,797. However, the recitation “a water vapour flow path from said exhalation flow passage to ambient air through said material,” as presented in **claim 1**, has not been granted the earlier effective filing date of May 8, 2001 since this claimed subject matter was not present in the parent application. Therefore, the prior art cited has been applied to the claimed subject matter of the instant application based on the filing date of July 18, 2003.

Art Unit: 3743

14. **Claims 1-3 and 5-7** are rejected under 35 U.S.C. 102(a) and/or 102(e) as being anticipated by Wikefeldt (US 6,523,538 B1). Regarding **claims 1 and 5-7**, Wikefeldt teaches a breathing circuit limb **100b** including: an inlet **106**; an outlet **124**; an enclosing wall defining a substantially singular exhalation flow passage **140** between said inlet **106** and said outlet **124**, at least a region of said enclosing wall being of a material that allows the passage of water vapour without allowing the passage of liquid water or respiratory gases; and a water vapor flow path from said exhalation flow passage **140** to ambient air through said material. Water vapour from the breathing gases passes through a moisture permeable element of exhalation flow passage **140** into chamber **142** and then exits from chamber **142** to the ambient environment by way of outlet **146** (column 5, lines 38-60). Regarding **claims 2-3**, the exhalation flow passage material is "formed of the water vapor permeable material made and sold by Perma Pure, Inc. of New Jersey, USA under the trademark 'Nafion'" (column 5, lines 42-45), which is a perfluorinated polymer membrane material.

Claim Rejections - 35 USC § 103

15. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3743

16. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

17. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

18. **Claim 4** is rejected under 35 U.S.C. 103(a) as being unpatentable over Wikefeldt (US 6,523,538 B1), as applied to **claim 1** above, in view of Skarstrom et al. (US 3,735,558). Wikefeldt discloses an apparatus comprising all the limitations recited in **claim 4**, with the exception of the material being a hydrophilic polyester block copolymer. However, the use of this type of water vapor permeable material was known at the time the invention was made. Specifically, Skarstrom et al. teaches the use of a hydrophilic polyester block copolymer for drying air by separating out the water vapor from the air by allowing the water vapor to permeate through the material (column 12, lines 46-58), leaving behind the dried air. Therefore, it would have been obvious to

Art Unit: 3743

one having ordinary skill in the art at the time the invention was made to modify the exhalation flow passage **140** of Wikefeldt by modifying it to be constructed of a hydrophilic polyester block copolymer (instead of a perfluorinated polymer) because it is well known in the art, as taught by Skarstrom et al., to use this type of permeable material in order to separate the water vapor from the air in order to dry the air and reduce condensation in the apparatus.

19. **Claims 8-9** are rejected under 35 U.S.C. 103(a) as being unpatentable over Wikefeldt (US 6,523,538 B1), as applied to **claims 1** and **5** above, in view of Coleman et al. (US 5,233,996). Wikefeldt discloses an apparatus comprising all the limitations recited in **claims 8-9**, with the exception of disclosing the type of manufacturing method used to make the exhalation flow passage. However, the use of extrusion to produce the exhalation flow passage conduit was known at the time the invention was made. Specifically, Coleman et al. teaches the use of extrusion for producing a NAFION® conduit. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to produce the exhalation flow passage conduit of Wikefeldt by the method of extrusion because it is well known in the art, as taught by Coleman et al., to use the manufacturing method of extrusion in order to produce a water permeable conduit (column 9, line 36 through column 10, line 28).

20. **Claims 8-9** and **13** are rejected under 35 U.S.C. 103(a) as being unpatentable over Wikefeldt (US 6,523,538 B1), as applied to **claims 1** and **5** above, in view of Smith et al. (US 2003/0070680 A1). Wikefeldt discloses an apparatus comprising all the limitations recited in **claims 8-9** and **13**, with the exception of disclosing the type of

Art Unit: 3743

manufacturing method used to make the exhalation flow passage. However, the use of blown-film extrusion to produce the exhalation flow passage conduit was known at the time the invention was made. Specifically, Smith et al. teaches the use of extrusion for producing a NAFION® conduit. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to produce the exhalation flow passage conduit of Wikefeldt by the method of blown-film extrusion because it is well known in the art, as taught by Smith et al., to use the manufacturing method of blown-film extrusion in order to produce a water permeable conduit (paragraph [0019]).

21. **Claims 8-12 and 14-18** rejected under 35 U.S.C. 103(a) as being unpatentable over Wikefeldt (US 6,523,538 B1), as applied to **claims 1 and 5** above, in view of Carlson et al. (US 4,337,800). Wikefeldt discloses an apparatus comprising all the limitations recited in **claims 8-12 and 14-18**, with the exception of longitudinal strips running the complete length of the exhalation flow passage conduit, produced by the manufacturing method of extrusion, as well as helically wound strips on the conduit. However, the use of an extruded conduit with longitudinal strips and/or helically wound strips was known at the time the invention was made. Specifically, regarding **claims 8-10 and 12**, Carlson et al. teaches the use of an extruded hose (column 2, lines 7-9) that contains longitudinal strips **10** running the complete length of the conduit, as shown in Figure 1. Regarding **claim 11**, Carlson et al. also teaches helically wound strips, also shown in Figure 1, that extend parallel to the axis of the conduit and are bonded together (column 2, lines 7-15). Further, regarding **claim 14**, Carlson et al. discloses lateral reinforcement to provide for a crush resistant hose (column 2, lines 43-45).

Art Unit: 3743

Regarding **claims 15-17**, the lateral reinforcements include annular corrugations or helical beads **30** distributed over the length of the conduit. Regarding **claim 18**, the hose has ribs, which are skeletal reinforcing structures. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the exhalation flow passage conduit of Wikefeldt by adding at least one longitudinal strip and/or a helically wound strip because it is well known in the art, as taught by Carlson et al., to add these types of structures to a conduit in order to add structural reinforcements to produce, by the method of extrusion, an inexpensive and stronger, crush-resistant and flexible hose, which would be less likely to be damaged with repeated use (column 1, lines 54-57).

Conclusion

22. Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Andrea M. Ragonese whose telephone number is 703-306-4055 until November 17, 2004**. Examiner Ragonese can be reached at 571-272-4804 thereafter. The Examiner can normally be reached on Monday through Thursday from 8:30 am until 4:30 pm.

23. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Henry A. Bennett can be reached on 703-308-0101 until November 17, 2004, and thereafter, at 571-272-4791. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Art Unit: 3743

24. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
